Everything going well so far! Unit has been producing plenty of water (at least last I heard prior to this cold snap) and preliminary results are as expected

**Ex. 4 - CBI**

Thanks Michael,

How have things been going? Any preliminary results/surprises?

*Jim*

I'll reach out to Avi but I don't anticipate this being a problem. According to manual the unit has a standby mode where it remains on but not in operation. If this prevents the noise could be an easy solution.

The interviews themselves would only require it to be off a few hours. There will be 3 ~20 minute interviews. I cannot give you the times yet.

How long would you anticipate the unit being off line for? I don't think a few hours matters.

I think we need to shut down the unit on 3/27 to control noise while a film crew is interviewing researchers at T&E. The film crew will likely set up near the water generator. You could either shut it down or fill up the tank to keep it from running. Any objections?

We have completed pilot testing and an acclimation period and are beginning a 12 week sampling campaign tomorrow. Testing is therefore anticipated be completed at the end of May.

Thanks,

Michael

What is the status of this project? Any idea how much longer the magic water machine will be

onsite at T&E?

Thankss,

Josh Weber
